## PROFESSIONAL SUMMARY

Data Analytics graduate candidate with financial services operations experience and hands-on training in Python, SQL, Tableau, Power BI, machine learning, and statistical analysis. Built end-to-end portfolio projects involving large-scale ETL, PostgreSQL validation, BI dashboards, hypothesis testing, regression modeling, and hourly time-series forecasting. Experienced in analyzing account-level financial data, reconciling payment histories, identifying discrepancies, and communicating insights for operational and business decision-making. Seeking Data Analyst, BI Analyst, Business Analyst, or Reporting Analyst roles.

## TECHNICAL SKILLS

**Languages & Querying:** Python, SQL, PostgreSQL

**Python Libraries:** pandas, NumPy, scikit-learn, statsmodels, XGBoost, TensorFlow/Keras, Prophet

**BI & Visualization:** Power BI, Tableau, Matplotlib, Excel

**Analytics Methods:** ETL, Data Cleaning, Feature Engineering, Time-Series Forecasting, Hypothesis Testing, Regression Analysis

**Tools:** Git/GitHub, Jupyter Notebook, VS Code

**Domain Knowledge:** Financial Services Operations, Auto Finance, Mortgage Servicing, Bankruptcy Operations, Consumer Complaints, Healthcare Analytics

## WORK EXPERIENCE

---

**Financial Analyst** | AIS Business Solutions Pvt Ltd | Vadodara, India (US Clients) *Jun 2023 – Jul 2024*

- Reviewed post-bankruptcy auto finance accounts for US financial services clients, including Chapter 7 and Chapter 13 discharge-related account updates.
- Reconciled loan payment histories, outstanding balances, reaffirmation details, and account status information using internal loan servicing systems and Microsoft Excel.
- Identified account-level discrepancies in post-discharge balances, payment records, and documentation, escalating exceptions to senior reviewers for resolution.
- Prepared structured account summaries and operational reports to support client-facing deliverables across auto finance, banking, and mortgage servicing workflows.
- Worked in a regulated financial operations environment requiring accuracy, documentation control, and compliance with US bankruptcy and account servicing procedures.
- Maintained high accuracy on time-sensitive account reviews while supporting quality control standards for US-based financial institution clients.

## ANALYTICS PROJECTS

---

**Alberta Electricity Load Forecasting** | *Python, XGBoost, LSTM, Prophet, Tableau* | [Github](#)

- Built an end-to-end forecasting and dashboard project analyzing Alberta hourly electricity load, generation mix, regional demand, and high-demand surge periods.
- Engineered 20+ time-series features, including cyclical calendar variables, load lags, rolling statistics, holiday indicators, and temperature-based predictors.
- Compared baseline, ARIMA/SARIMAX, Prophet, XGBoost, and LSTM models on a 2024 holdout test set; XGBoost Direct achieved the best performance with 70.16 MW MAE and 1.02% MAE relative to average load.

- Designed a 4-page Tableau dashboard to communicate demand seasonality, regional load patterns, fuel mix changes, surge-hour behavior, and model performance.

### **Hospital VBP Financial Disparities** | *Python, Hypothesis Testing, Regression* | [Github](#)

- Analyzed FY2021 hospital financial performance using CMS HCRIS, Medicare VBP adjustment factors, CDC Social Vulnerability Index, and county crosswalk data.
- Cleaned and merged multi-source healthcare datasets to evaluate operating margin, VBP adjustment factors, rural/urban status, hospital size, and county-level social vulnerability.
- Conducted statistical assumption checks, Welch t-tests, ANOVA, Tukey HSD, chi-square tests, Pearson correlation, and OLS regression with HC3 robust standard errors.
- Found rural hospitals had significantly lower operating margins than urban hospitals, while VBP adjustment factors did not strongly explain operating margin after controls.

### **CFPB Complaint Operations Analysis** | *Python, PostgreSQL, Power BI, ETL* | [Github](#)

- Built a Python ETL pipeline processing 8.67M CFPB consumer complaint records for operational analytics and BI reporting.
- Engineered complaint operations metrics including untimely response flags, heavy-channel indicators, narrative length, complaint age, and an effort-proxy score.
- Designed PostgreSQL schema, validation scripts, analysis views, and SQL queries to support repeatable data quality checks and reporting.
- Built a 2-page Power BI dashboard for Complaint Operations Leadership to analyze complaint volume, risk signals, workload concentration, and operational burden by product domain.

## **EDUCATION**

---

### **Graduate Certificate – Data Analytics for Business**

*Apr 2026*

St. Clair College | Windsor, ON, Canada | GPA: 3.94 / 4.0

### **Bachelor of Science – Mathematics**

*2022*

Maharaja Sayajirao University of Baroda | Vadodara, India
